No Fat

1 Minute

Resting pulse is the lowest and medium density.

Walking pulse is slightly higher than resting.

Running pulse is decrease significantly

Median value is highest in running.

15 Minutes

Pulse gradually increases from rest → walking → running.

Running has the highest pulse range and the widest spread.

Density is also more spread in walking.

Median value is highest in running.

30 Minutes

Running shows the highest pulse and the highest median.

Walking is a medium.

Resting is the lowest.

Compared to 15 minutes, the running pulse increases more.

No Fat vs Low Fat

In both diets, running always gives the highest pulse.

No fat diet shows slightly higher pulse values than a low-fat diet, especially in running.
